

GRT: Wet-Loc WATERLESS DUST

Waterless dust control solution - Lock down your dust

GRT Wet-Loc is our newest and most advanced synthetic dust suppression product. Using revolutionary technology, long-lasting GRT Wet-Loc is engineered to meet the most demanding dust control situations.

Scientifically formulated from the most environmentally sustainable feedstocks, this non-hazardous, road moisturising emollient is crystal clear, completely odorless and easy to apply. It features cutting edge penetrating and aggregating technology that allows GRT Wet-Loc to permeate deep into the finest of dust particles, weighing them down securely like water, but without the threat of evaporation or freezing.

In fact, GRT Wet-Loc's unique formula creates a long-term, re-workable solution capable of withstanding extreme weather conditions. Plus, it's been formulated to meet the highest environmental standards.

- Simple and easy application
- Completely odorless clear fluid
- Non-corrosive and safe for equipment
- Non-toxic, non-flammable and non-volatile
- Safe for human, animal, marine life and vegetation

GRT Wet-Loc is at its best in areas where watering programs aren't suitable and when durability is needed. The self-healing and re-workable properties of GRT Wet-Loc offer exceptional long-term performance on a wide range of surfaces, including gravel, sand, clay, limestone and most native soils. With correct dosage and application, it can remain actively effective for up to 12 months, regardless of the weather or severity of traffic. GRT Wet-Loc also requires fewer applications than other dust control and surface-stabilisation options. Best of all, with no cure time required, GRT Wet-Loc treated areas are ready for use and vehicle traffic after application, saving your infrastructure project both time and money.

With its long-term fine particle penetrating action, new GRT Wet-Loc offers outstanding dust control performance on a diverse range of surfaces under the most demanding weather conditions.

KEY BENEFITS

Compared to conventional processes, GRT Wet Loc offers:

- **No ongoing watering requirements**
- **Long term performance with outstanding UV Ray resistance stability**
- **Actively re-workable and self healing**
- **Non-slip finish** and safe to drive on once penetrated
- **Safe for workers and environmentally friendly**
- **Non-film forming** makes it perfect for yards, hardstands and roads with heavy truck, tractor, chained wheels or caterpillar track movements
- **Formulation resists being washed out by rain** unlike many dust suppression products in the market

Quality Assured

GRT Wet-Loc is manufactured to ISO9001 standards and has been comprehensively reviewed by leading independent testing institutions and major companies worldwide.
